EDUCATION

Iowa State University

Expected Graduation: Spring 2026

Bachelor of Science in Software Engineering, Minor in Cybersecurity

GPA: 3.48

- Honors & Awards: ECSEL Scholar, Roy J. Carver Scholar, Dean's List (Spring 2025)
- Related Coursework: Embedded Systems (ARM Cortex-M4, Embedded C & ARM Assembly), Computer Architecture (LEGv8), Operating Systems, Data Structures, Cybersecurity

EXPERIENCE

Software Engineer Intern – Case Management Team

May 2025 – August 2025

Principal Financial Group

- Built and deployed 3+ production features using React, TypeScript, and REST APIs, improving internal onboarding workflows.
- Designed and documented RESTful APIs to integrate frontend and backend services.
- Contributed to AWS deployments supporting scalability, performance, and security.
- Collaborated in Agile/Scrum teams across U.S. and India.

STEM Scholars Tutor – COMS 227 (Java OOP)

March 2024 – Jan 2026

Iowa State University

- Tutored students in Java, OOP, debugging, data structures, and foundational low-level concepts.
- Led review sessions to reinforce core programming concepts.

Undergraduate Researcher – AWS Python Conversion Project

August 2023 – December 2023

Iowa State University

- Migrated workflows from MATLAB to Python on AWS, improving runtime performance by ~40%.
- Co-led Python workshops for 20+ participants.

Surplus Technician (Student Worker)

December 2025 – Present

Iowa State University

- Processed, handled, and inventoried computer hardware for resale or disposal.
- Updated asset records and supported weekly intake operations.

PROJECTS

CourseFlow | React Native, Spring Boot, PostgreSQL, Neo4j

August 2025 – Present

- Built a cross-platform degree planning platform with interactive prerequisite visualization and optimized scheduling.
- Designed a hybrid PostgreSQL + Neo4j architecture to model complex course dependencies.
- Developed scalable frontend and backend services using Agile and CI/CD practices.

CyMarket | Java, Android Studio, REST APIs, WebSockets

January 2024 – May 2024

- Developed an Android marketplace app with real-time listings, auctions, and user interactions.
- Implemented REST APIs and WebSockets for low-latency updates.
- Improved task completion speed by ~25% through optimized UI and backend integration.

Technology Layoffs Prediction Model | Python, pandas, NumPy, Matplotlib

June 2023 – July 2023

- Built ML pipelines to predict layoff risk for 1,000+ U.S. tech companies.
- Trained Logistic Regression and XGBoost models achieving 80%+ accuracy.

TECHNICAL SKILLS

Programming Languages: Java, Python, C/Assembly, JavaScript, TypeScript, HTML, CSS, SQL

Systems & Testing: LEGv8 (ARM-based ISA), memory management, OS-level concepts, TCP/IP, JUnit

Web & Frameworks: React, Spring Boot, Node.js, REST

Data & ML: pandas, NumPy, Matplotlib

Tools: Git, Linux (CLI), AWS, Microsoft Teams, Android Studio
